

Clustering Workshop

1. In this workshop, we shall perform Customer Segmentation using K-Means clustering.
2. Use the dataset **cust_seg_no_missingdata.csv** for the questions that follow.
3. Plot 4 histograms to show the distributions for the following features:
 - a. Age
 - b. Income
 - c. Years Employed
 - d. Debt Income Ratio
4. Plot the number of Default and Non-Default cases.
5. Cluster your updated dataset into **3** clusters using K-Means.
6. Create a 3D plot of your clustering results using these 3 attributes:
 - a. **Age**
 - b. **Income**
 - c. **Card Debt**
